

# First Homework Assignment

The experiment where homework was only collected online last year was a success. The goal of this assignment is for you to make sure you can submit your work in the required manner. On my end, many things can cause delays grading papers. With 165 students, an extra 5 seconds of a document loading adds up. This means an additional 13 minutes of grading each day; which becomes a bit over an hour a week; and that means about 40 extra hours per year. I am going to avoid all of that.

All homework must be in pdf format.

Multiple pages must be combined into one document.

(I do not care what program you use; but, if you have an iPhone, the notes application has a great document scanner, CamScanner is also super easy to use and quick)

To earn credit, work must be written by hand with pencil on paper.

Homework is due by 6:00 am on the due date.

## Homework Assignment:

Page 1: Draw yourself , showing something that other people find interesting about you.

Page 2: Copy the requirements outlined above for homework submissions.

Page 3: Make a unit circle, omitting degree measures; those are not used in calculus.
