

# Table of Contents:

**Lesson One:** Order of Operations

**Lesson Two:** Plotting Points

**Lesson Three:** Slope Intercept Form

**Lesson Four:** Graphing Lines

**Lesson Five:** Standard Form to Slope  
Intercept Form

**Lesson Six:** Exponent Rules

**Lesson Seven:** Multiply Binomials

## Order of operations

- I can evaluate expressions using order of operations

G rouplings ( ) [ ]

E xponents  $x^2$

M ultiplication or Division (left to right)

S ubtraction or addition (left to right)

### Guided Practice

①

$$3^2 + (2+7) \div 3$$

$$3 \cdot 3$$

$$3^2 + 9 \div 3$$

$$4 \cdot 2$$

$$9 + 9 \div 3$$

$$2 \cdot 2 \cdot 2 \cdot 2$$

$$9 + 3$$

$$\boxed{12}$$

G

E

M/D

S/A

②

$$4 \cdot 2 + 5^2 - 1$$

$$5 \cdot 5$$

$$4 \cdot 2 + 25 - 1$$

$$8 + 25 - 1$$

$$33 - 1$$

$$\boxed{32}$$

## Plotting Points

(x, y)

① A x y  
(-6, 2)

② B x y  
(3, -4)

③ C x y  
(-5, -7)

④ D x y  
(2, 3)

⑤ E x y  
(0, 4)

⑥ F x y  
(-3, 0)

## On Your Own

① A x y  
(0, 2)

② B x y  
(4, -2)

③ C x y  
(-5, 3)

④ D x y  
(7, 0)

## Slope Intercept Form

$$y = mx + b$$

slope

y-intercept

y intercept (b): point where your line crosses the y-axis

Slope (m):  $\frac{\text{rise} \downarrow}{\text{run} \leftarrow}$

Examples:

①

$$y = 2x - 3$$

$$\text{slope} = \frac{2}{1}$$

$$\text{y-intercept} = (0, -3)$$

②

$$y = \frac{1}{3}x + 2$$

$$\text{slope} = \frac{1}{3}$$

$$\text{y-intercept} = (0, 2)$$

# ① Graphing ( $y = mx + b$ )

• I can graph an equation in slope intercept form.

①  $y = \frac{1}{3}x + 4$

$m$  slope:  $\frac{1}{3}$   $b$  y-int ( $0, 4$ )  
rise run start

②  $y = 5x - 2$

$m$  slope:  $\frac{5}{1}$   $b$  y-int ( $0, -2$ )  
rise run start

③

$y = -\frac{1}{2}x + 1$

$m$  slope:  $-\frac{1}{2}$   $b$  y-int ( $0, 1$ )  
rise run start

④

$y = \frac{4}{3}x + 5$

$m$  slope:  $\frac{4}{3}$   $b$  y-int ( $0, 5$ )  
rise run start

08/21/2020

## Standard form to Slope intercept form

- I can change an equation from standard form to Slope intercept form.

Standard form:  $Ax + By = C$

Slope intercept form:  $y = mx + b$

\* Use O-M-S to get Ax and B on the right side of the equal sign \*

Examples

$$\textcircled{1} \quad Ax + By = C \quad | \quad y = mx + b$$
$$2x + 3y = 9$$

~~$-2x$~~

$$3y = -2x + 9$$

$$y = -\frac{2}{3}x + 3$$

$$\textcircled{2} \quad X + 4y = 16$$

~~$-X$~~

$$4y = -X + 16$$

$$y = -\frac{1}{4}x + 4$$

$$\textcircled{3} \quad -8x - y = 6$$

$+8x$     $+8x$

$$-y = 8x + 6$$

$-1$     $-1$     $-1$

$$y = -8x - 6$$

## 08/25 Exponent Rules

- I can evaluate expressions containing exponents.

### Exponent Laws

$$X^a \cdot X^b = X^{a+b}$$

$$\frac{X^a}{X^b} = X^{a-b}$$

$$\frac{X^{-a}}{1} = \frac{1}{X^a}$$

$$X^0 = 1$$

$$(X^a)^b = X^{a \cdot b}$$

$$\left( \frac{X^a Y^a}{Z^a} \right)^a = \frac{X^a Y^a}{Z^a}$$

# 08/27 Multiply Binomials

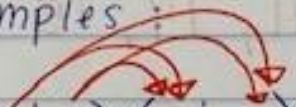

I can simplify polynomials

First  
Outer  
Inner  
Last

Then, Combine  
like terms

Examples:

①  $(x-3)(x+2)$

$$x^2 + 2x - 3x - 6$$
$$x^2 - 1x - 6$$
$$x^2 - x - 6$$

②  $(5x-8)(2x-11)$

$$10x^2 - 55x - 16x + 88$$
$$10x^2 - 71x + 88$$

③  $(x+4)(2x+5)$

Box  
method

	$x+4$	
$2x$	$2x^2$	$8x$
$+5$	$5x$	$20$

$$2x^2 + 13x + 20$$
