

CHEMICAL HYGIENE PROGRAM

PURSUANT TO
CALIFORNIA CODE OF REGULATIONS
TITLE 8 SECTION 5191

PURPOSE

Chino Valley Unified School District (CVUSD) has developed a Chemical Hygiene Program (CHP) to train all employees and protect them from the health hazards associated with the handling and use of hazardous chemicals in the laboratories. In addition, safety rules and work procedures are specified to ensure that employees perform their work in a safe manner.

A CHP is defined as a written program which sets forth procedures, equipment, personal protective equipment and work practices that are capable of protecting employees from the health hazards presented by hazardous chemicals used in that particular workplace. Components of the CHP must include standard operating procedures for safety and health, criteria for the implementation of control measures, measures to ensure proper operation of engineering controls, provisions for training and information dissemination, permitting requirements, provisions for medical consultation, designation of responsible personnel, and identification of particularly hazardous substances.

This CHP is located in the laboratory classroom spaces, the Chemical Hygiene Officer's office and electronically on the CVUSD, Risk Management [website](#) and should be readily available to laboratory employees. All laboratory personnel must know and follow the procedures outlined in this plan. All operations performed in the laboratory must be planned and executed in accordance with the enclosed procedures. In addition, each employee is expected to develop safe personal chemical hygiene habits aimed at the reduction of chemical exposures to themselves and co-workers.

SCOPE

To protect employees and students from health hazards associated with the use of hazardous chemicals. This is accomplished through the following:

- Identifying hazardous chemicals.
- Developing an outline of responsibilities in the district.
- Developing safe procedures.
- Discussing procedures for procurement, distribution, and storage of chemicals.
- Implementing a plan for monitoring safety equipment and storage areas.
- Developing a written plan to address accidents involving chemicals.
- Establishing a chemical hazard training program; and
- Developing a chemical waste disposal program.

POLICY STATEMENT

It is the policy of CVUSD to provide proper facilities, equipment and a safe and healthful environment for employees. CVUSD attempts to comply with all local, state and federal regulations to inform employees of potential hazards in the work area.

RESPONSIBILITIES

A Chemical Hygiene Officer (Principal and or Assistant Principal, designated by the site administrator), and a Chemical Hygiene Representative, shall be assigned to each CVUSD, campus site with a laboratory program, which includes the storage and handling of chemicals.

The Chemical Hygiene Officer, site designee with the assistance of CVUSD, Risk Management will be in charge of the complete overview of the chemical hygiene program and will be responsible for designation of individuals who will serve as chemical hygiene officers.

The Chemical Hygiene Officer will be responsible for ensuring appropriate evaluations are conducted to identify chemical processes, hazardous materials and protective measures needed to ensure adequate protection at the facility. The Chemical Hygiene Officer will enforce the following:

1. Ensure school personnel have received the appropriate safety training for their level of exposure to chemicals at the facility.
2. Employees have access to the Chemical Hygiene Program.
3. Employees are following the chemical hygiene procedures.
4. Health and safety inspections are being performed and appropriate records are being maintained.
5. Ensuring the facility is in compliance with applicable local, state and federal guidelines.

The assigned duties can be found in the following areas:

1. Current officers are listed in Appendix 1 (attached).
2. Individuals may be designated to more than one office.

The District-wide, Safety Committee (DWSC) assists in the regular review of the program in conjunction with the School Site Safety Council (SSSC) and all parties work collaboratively with each, applicable school site, with identified laboratory/curriculum spaces to ensure effective implementation of the program.

The Principal/Chemical Hygiene Officer may be required to designate a Chemical Hygiene Representative for school's/ facilities that do not have one currently assigned.

The Principal/Chemical Hygiene Officer has responsibility for ensuring that employee training in the handling and use of hazardous chemicals and safe operating procedures to reduce accidents. All employees have the responsibility to follow all specified procedures to make CVUSD a safe and healthful facility in which to work.

REFERENCES

- [CVUSD, Blood borne Pathogens Program](#)
- [CVUSD, Hazard Communication Program](#)

DEFINITIONS

PEL Permissible Exposure Limits: The maximum permitted 8-hour time weighted-average concentration of an airborne contaminant.

CA Carcinogenic: A substance capable of causing cancer in living tissue.

SDS Safety Data Sheets: A document that lists pertinent chemical information for the specific chemical it is designed for.

CHEMICAL EXPOSURE MINIMIZATION

All chemical exposure will be minimized; the necessary operating procedures, personal protective equipment and engineering controls will be utilized to maintain employee exposure below permissible exposure limits (PEL).

The Chemical Hygiene Program is available to all employees for review.

The Chemical Hygiene Program will be reviewed by the Chemical Hygiene Officer and updated, if necessary, on at least an annual basis.

Engineering Controls

Engineering Controls (e.g., ventilation hoods, guarded parts of machinery and equipment, etc.) are designed to protect individuals who may be exposed to a health or safety hazard. In order to ensure proper protection, these engineering controls must be maintained in proper working condition. No modification will be allowed on any engineering controls without prior manufacturer approval. Any

approved modifications shall be implemented following the most stringent safe practices.

The improper function of any engineered device must be taken out of service and reported promptly to the Chemical Safety Officer. The engineering controls shall not be used again until the proper repairs are completed, and the controls offer adequate protection for the individuals in the area.

The laboratory areas are designed with the necessary air handling equipment, exhaust hoods, chemical storage areas and safety equipment to minimize employee exposure to hazardous chemicals.

Fume hoods are installed in the laboratories to contain and remove hazardous chemicals from the work area.

1. Hoods are certified semi-annually or annually as required by state and federal regulations.
2. Fume hood operators will inspect their equipment before each use. If an operator notes that a hood or cabinet is not operating correctly, it should be identified as "out of service" and appropriate personnel contacted to initiate a Work Request and to identify and correct the problem.

All equipment is inspected on a weekly / monthly / quarterly basis as necessary.

Administrative / Work Practice Controls

Staff shall be trained in the safe handling procedures for chemicals they use in their standard work activities. Employees will be directed to follow the Safe Operating Procedure (SOP) for the specific tasks that would require them to work near chemicals. All engineering controls, safe work practices and personal protective requirements will be followed.

Employees who encounter a procedure or task for which an SOP or documented training does not exist must receive prior documented training approval from their immediate supervisor to perform that procedure or task.

Personal Protective Equipment

CVUSD will enforce the use of all personal protective equipment when required for tasks or procedures involving chemicals. The Chemical Hygiene Representative, working collaboratively with the Chemical Hygiene Officer will be responsible for identifying the correct personal protective equipment required for

the chemical tasks. All personal protective equipment will be provided and maintained at the facility in sufficient supplies. Employees will be required to maintain personal protective equipment in good condition. Some examples of the types of personal protective equipment and their designated minimum requirements can include:

- Safety glasses meeting ANSI Z87.1 are required for employees and visitors to the laboratory and will be worn at all times when in the laboratory. Contact lenses are prohibited in the laboratory, except as approved by the Chemical Hygiene Officer and supervisor.
- Chemical goggles and/or a full-face shield shall be worn during chemical transfer and handling operations as procedures dictate.
- Sandals, perforated shoes, sneakers and bare feet are prohibited. Safety shoes, per ANSI 47 are required where employees routinely lift heavy objects.
- Lab coats are provided and must be worn in the laboratory. Laboratory coats will be laundered on a periodic basis, not to exceed monthly. Laboratory coats shall be removed immediately upon discovery of significant contamination.
- Appropriate chemical-resistant gloves shall be worn at all times when there may be skin contact with chemicals. Used gloves shall be inspected and washed prior to re-use. Damaged or deteriorated gloves will be immediately replaced. Gloves shall be washed prior to removal from the hands.
- Thermal-resistant gloves shall be worn for operations involving the handling of heated materials and exothermic reaction vessels. Thermal-resistant gloves shall be non-asbestos and shall be replaced when damaged or deteriorated.
- Respirator usage shall comply with the OSHA Respiratory Protection Standard, 29 CFR 1910.134, CCR Title 8, Section 5144, and the [CVUSD Voluntary Respiratory Program](#).

Personal Work Practices

The following work practices will be evaluated for and used when appropriate:

- Laboratory supervision must ensure that each employee knows and follows the rules and procedures established in this plan.
- All employees shall remain vigilant to unsafe practices and conditions in the laboratory and shall immediately report such practices and/or

conditions to the laboratory supervisor. The supervisor must correct unsafe practices and or conditions promptly.

- Long hair and loose-fitting clothing shall be confined close to the body to avoid being caught in moving machine/equipment parts.
- Use only those chemicals appropriate for the ventilation system.
- Avoid unnecessary exposure to all chemicals by any route.
- Do not smell or taste any chemicals.
- Encourage safe work practices in coworkers by setting the proper example. Horseplay is strictly forbidden.
- Seek information and advice from knowledgeable persons, standards and codes about the hazards present in the laboratory. Plan operations, equipment and protective measures accordingly.
- Use engineering controls in accordance with Section 3.0.
- Inspect personal protective equipment prior to use, and wear appropriate protective equipment as procedures dictate and when necessary, to avoid exposure.

CHEMICAL SUBSTANCES MIXED IN THE LABORATORY

In the event that CVUSD employees produce a chemical substance exclusively for the laboratory whose composition is unknown, CVUSD shall determine if it is a hazardous chemical; if it is deemed hazardous, CVUSD shall provide appropriate training and labeling as required by CCR Title 8 § 5191(F) and 5194, the Laboratory and Hazard Communication standards, respectively.

If the chemical produced is a byproduct whose composition is not known, CVUSD shall assume that the substance is hazardous and shall implement all policies and procedures within this Chemical Hygiene Plan.

COMPONENTS OF THE CHEMICAL HYGIENE PROGRAM

Hazard Communication

Hazard identification is a critical function that must be performed before a job is initiated. This information can be obtained through training, supervisor instruction, and reviewing SDS and other appropriate references; in information listed on container labels for the materials handled; by environmental monitoring of the work area; and by hazard analysis of the job to be performed. Additional information on hazard identification is listed in CVUSD's [**Hazard Communication Program**](#).

Labels for incoming containers of hazardous materials must not be removed or defaced. The label must, however, be marked with a large "X" through the label when the container is empty to prevent the container from being mislabeled if subsequently used for other materials.

Copies of SDS are maintained near the work areas, CVUSD SDS's can also be retrieved electronically, at [**MSDSonline**](#). New and/or revised SDS are received by the Chemical Hygiene Officer and coordinated distribution takes place, working with the Chemical Hygiene Representative, in the applicable area on a regular basis.

Additional safety and handling procedures are required for OSHA-listed or other carcinogens. These materials are identified as "CA" (carcinogenic) on the Chemical Inventory records or listed as a carcinogen or potential carcinogen on the SDS.

Carcinogens, if any, should be handled with extra care to keep employee exposure below designated permissible exposure limits by utilizing one or more of the following techniques:

1. Handle, transfer and use in a designated area of the laboratory, such as a fume hood, glove box or biological safety cabinet.
2. Safely dispose of contaminated waste. Contact the Safety Coordinator for specific instructions.
3. Decontaminate the work area and associated equipment as required for each specific material.
4. Additional information on the safe handling of hazardous chemicals may be obtained by requesting the information from your supervisor or the Safety Coordinator.

GENERAL SAFETY RULES FOR HANDLING HAZARDOUS CHEMICALS

The toxicology of hazardous chemicals is listed in the appropriate SDS. The SDS lists all precautions employees should take to protect themselves. Procedures are also listed for spills, emergencies and recommended disposal methods for the specific chemicals.

Hazardous Chemical Procurement, Distribution and Storage

All chemicals and materials will be delivered, received, distributed and maintained following all manufacturer guidelines to ensure proper use and storage. All manufacturers will be requested to supply SDS for their product. All chemicals are delivered to the Receiving Department before delivery to the laboratories.

Radioactive Materials Provision

Radioactive materials are prohibited in the CVUSD. The Chemical Hygiene Officer, shall consult with CVUSD Risk Management, if any such materials are brought to the school site campus.

Radioactive sources emitting ionizing radiation, which may have been previously acquired and properly packaged/sealed for safety, utilized for curriculum purposes shall be pre-approved on a case-by-case basis, by Risk Management and the site Chemical Hygiene Officer.

Glassware and Equipment

All glassware and equipment will be kept in clean, sanitary condition and employees and faculty will be responsible for keeping the area clean. Any glassware containing any chemical mixtures will need to be identified and properly labeled. Glassware will be handled with appropriate care to minimize damage and any broken glassware will be disposed of safely as soon as possible. Laboratory equipment, including glassware, will be inspected on a frequent basis to ensure its correct and safe use.

On a periodic basis, stored chemicals are examined for deterioration. Deteriorated and obsolete chemicals are disposed of in a safe manner and in compliance with state and local regulations. Efforts are made to distribute and use chemicals on a first-in, first-out basis.

Highly Toxic or Biohazardous Materials - Safe Work Practices

(For detailed biohazard handling procedures, refer to CVUSD's Bloodborne Pathogens Program)

Study and understand the safe work practices to handle highly toxic materials.

Chemical Inventory

Inventories are compiled routinely for all chemicals in the various laboratories and departments. Using the SDS as a basis, the chemical hazards are determined and entered into the Inventory. Master copies of the Chemical Inventory will be maintained in the office of the Chemical Hygiene Officer and the laboratory classroom spaces and or an easily accessible location for laboratory classroom teachers to be able to access a centralized, chemical inventory.

Hazardous Work

All hazardous operations are to be performed during a time when at least two personnel are present at the laboratory. At no time shall a laboratory person, while working alone in the laboratory, perform work that is considered hazardous. The determination of hazardous operations shall be made by the laboratory supervisor and permitted.

Working with Chemicals of Moderate Chronic or High Acute Toxicity

Areas where these chemicals are stored and used are of restricted access and have special warning signs.

A special hood with a minimum face velocity of 60 linear feet per minute or other containment device will be used. Released vapors will not discharge with the hood exhaust but will be trapped.

Gloves and long sleeves will be used. Hands and arms will be washed immediately after working with these chemicals.

Two people will always be present during work with these chemicals.

Environmental Monitoring

Using the Chemical Inventory as a basis, those volatile hazardous chemicals used on a frequent basis will be determined. For these chemicals, an initial air monitoring is conducted if there is reason to believe that airborne levels could exceed the action level or PEL. If exposure levels exceed the action level or PEL, engineering controls and/or personal protection equipment will be provided. Employees will be individually notified in writing or by posting the test results within 15 working days after receiving the information.

Additional air monitoring will be performed if new hazardous chemicals are introduced to an area or procedures or equipment are changed.

Records will be maintained of all environmental monitoring and testing.

CVUSD will use the above testing results to determine appropriate engineering controls, personal protective equipment and hygiene practices to implement.

Housekeeping, Maintenance and Inspections

Employee safety rules require that employees maintain their work areas in a clean and safe condition. SDS for hazardous chemicals shall be evaluated before starting work to anticipate any handling problems associated with the material.

Housekeeping and chemical hygiene inspections will be conducted periodically by members of the Chemical Hygiene Officer, management and / or designated employees. Information inspections can occur at any time. Inspections will be documented. Periodic inspections are conducted for the safety showers, eyewash stations, fire extinguishers and first aid kits.

MEDICAL SURVEILLANCE PROGRAM

Upon the determination of exposure thresholds, in accordance with current, Cal OSHA, **action level (AL)** and or **permissible exposure limits (PEL)** to the applicable/utilized hazardous chemicals the CVUSD shall establish a medical surveillance program for all impacted employees who handle hazardous chemicals, which meet the criteria of exposure above the PEL. Examinations will be performed by or under the supervision of a licensed physician. The examination is mandatory and will be provided at no cost to employees using the following criteria:

- If applicable, upon hire or transfer to a new position that requires a more extensive protocol or with new potential exposure and annually thereafter if no medical problems are detected during the year;
- Whenever an employee develops signs or symptoms associated with a hazardous chemical to which the employee may have been exposed in the laboratory.
- Where exposure monitoring reveals an exposure level routinely above the action level (or, in the absence of an action level, the PEL) for an OSHA-regulated substance for which there are exposure monitoring and medical surveillance requirements, medical surveillance will be established for the affected employee as prescribed by the particular standard.
- Whenever an event takes place in the work area such as a spill, leak, explosion or other occurrence resulting in the likelihood of a hazardous

- exposure, the affected employee shall be provided an opportunity for a medical consultation. Such consultation shall be for the purpose of determining the need for a medical examination; and
- At the CVUSD's discretion, upon termination of employment with CVUSD

RECORDS

If applicable, CVUSD will establish and maintain for each employee an accurate record of any measurements taken to monitor employee exposures and any medical consultation and examinations, including tests or written opinions required by the regulations. Records will be maintained for the duration of employment plus 30 years.

The Chemical Hygiene Officer, designee shall also maintain the following information:

1. Copies of all general CVUSD safety policies (*hard copies and or accessible electronically*).
2. Copies of Chemical Inventory reports and SDS for all chemicals used by CVUSD (*hard copies and or accessible electronically*).
3. Safety and housekeeping inspection reports and follow-up action.
4. Accident records and follow-up action reports, including required Cal-OSHA documentation, will be kept in the Chemical Hygiene Officer's office.

SIGNS AND LABELS

The CVUSD, [**Standard Emergency Operating Procedures**](#), with biological and chemical response procedures will be posted in all laboratory, classroom spaces. CVUSD risk management will provide updated Standard Emergency Operating Procedures, flip-chart and the Chemical Hygiene Officer shall be responsible for distributing, posting and ensuring applicable employee awareness of the procedures in the applicable laboratory, classroom spaces at the campus site.

Hazardous materials transferred from their original, labeled shipping container into a secondary container must be labeled in that container with the name of the contents and, if appropriate, other safety information on the material.

Hazardous material labels for secondary containers are available from the Safety Coordinator.

All rooms, closets, cabinets, refrigerators, etc. must be labeled as to the current substances stored within. If a new substance is introduced or an existing substance is removed from the storage area, the individual adding or removing the substance is responsible for affecting the current label posting to reflect the change. If the individual is unsure of appropriate required label changes, he/she shall request assistance from their supervisor.

SPILLS AND ACCIDENTS

School site, personnel shall adhere to the CVUSD, [Standard Emergency Operating Procedures](#) for spill responses involving biological, chemical releases or explosions, at the school site.

Any accidents shall be investigated by the Chemical Hygiene Officer and or designee and documented to determine what improvements can be made to avoid similar accidents in the future.

INFORMATION AND TRAINING OF EMPLOYEES

This information and training is designed to inform employees of the hazardous chemicals and physical hazards in their work area. The supervisor will give the initial training when the employee is first assigned to the work area; additional training will be performed whenever new hazardous chemicals and / or physical hazards are introduced to the work area. Employees will be trained in the following:

1. The contents and intent of the regulation CCR Title 8 § 5191, "Occupational Exposures to Hazardous Chemicals in Laboratories"
2. Availability of CVUSD's written general safety policies and Chemical Hygiene Program.
3. The permissible exposure limits (PEL) for OSHA-regulated substances or recommended exposure limits for other hazardous chemicals for which there is no applicable OSHA standard.
4. Signs and symptoms associated with exposure to hazardous chemicals used in the laboratory.
5. Location of reference material on the hazards, safe handling, storage and disposal of hazardous chemicals found in the laboratory.

6. Methods and observations that may be used to detect the presence or release of a hazardous chemical (such as monitoring conducted by CVUSD and visual appearance or odor of hazardous chemicals when being released, etc.)
7. The physical and other health hazards of chemicals in the work area.
8. Availability and use of safety equipment provided by CVUSD.

WASTE DISPOSAL

To assure the minimal harm to employees and the environment, CVUSD will dispose of wastes in the following manner:

1. Non-hazardous solid waste only will be allowed to be discarded in the regular trash containers (uncontaminated paper and normal office trash).
2. Sharps will be placed in Sharps containers available in each laboratory. These containers will be disposed of as need.
3. Biohazardous wastes will be disposed of in accordance with CVUSD's Bloodborne Pathogens Program
4. Compatible hazardous liquid solvent wastes will be collected into appropriately labeled safety cans / drums.

CVUSD is committed to complying with local regulations regarding the disposal of hazardous substances. Supervisors are responsible for communicating this information to the employees. Prior to disposing of waste into the sewer system, the following should be taken into consideration.

Only non-hazardous substances with a pH of 6-9 are to be discarded in the laboratory sinks.

Strong acids and bases must be diluted or adjusted to the pH 6-9 range before they are poured into the sewer system. Acids and alkalis should not be poured into the sewer drain at a rate exceeding the equivalent of 50 ml of concentrated substance per minute. Department supervisors are responsible for keeping Logbook records on this activity in each lab. With the exception of pH, these acids and bases must be non-hazardous.

Highly toxic, malodorous or lachrymatory chemicals must never be disposed down the drain or with normal trash. Consult the SDS or the Safety Coordinator for the appropriate disposal method.

No heavy-metal compounds may be disposed of in the sink at any time.

Extremely hazardous waste, including strong carcinogens, mutagens, etc., shall be disposed of in accordance with recommendations shown in the SDS.

ANNUAL PROGRAM AUDIT

The Chemical Hygiene Officer shall be responsible for ensuring *an annual program review occurs*. Any deficiencies, changes in regulation or other health and safety concerns will be evaluated for and the pertinent sections of this program will be updated. Any changes will be shared with the Chemical Hygiene Representative(s) and the changes will be discussed and shared with all applicable individuals.

Appendix 2: Acknowledgement of Receipt of Program

The following acknowledgement must be signed and delivered to the Principal/ Chemical Hygiene Officer. The Principal/ Chemical Hygiene Officer will retain this acknowledgement in the event it is requested by CVUSD Risk Management or District Administration.

I have read and understood the policies included in this Chemical Hygiene Program and I understand my responsibilities, as a teacher.

I understand that all science and classroom instruction must comply with these safety policies and standards. I understand that no laboratory activities will be performed without the proper facilities, personal protective equipment and safety instruction for students in place. I will ensure any pertinent Safety Data Sheets (SDS) are available in the event of an emergency.

Onion's Fusible Alloy	25 g.	Flinn Scientific Solid	2	50 g.
Oxalic Acid Solution	200 ml.	Flinn Scientific Liquid	2	400 ml.
Oxalis Acid	100 g.	Flinn Scientific Solid	2	200 g.
Paraffin Wax	20 g., 70 ml.	Flinn Scientific Solid	9	330 ml.
Phenol Red	500 ml.	Flinn Scientific Liquid	1	500 ml.
Phenolphthalein Indicator Solution	340 ml., 100	Flinn Scientific Liquid	10	2540 ml.
Potassium Carbonate	60 g	Flinn scientific Solid	11	660 g.
Potassium Bicarbonate	60 g.	Flinn Scientific Solid	6	360 g.

Potassium Bisulfate	4 g.	Flinn Scientific Solid	7	28 g.
Potassium Bitartrate	25 g, 4 g.	Flinn Scientific Solid	14	245 g.
Potassium Bromate Solution	1 Liter	Flinn Scientific Liquid	15	15 Liter
Potassium Carbonate	30 g	Flinn Scientific Solid	1	30 g.
Potassium Chloride	50 g.	Flinn Scientific Solid	2	100 g.
Potassium Ferrocyanide Solution	180 ml., 200	Flinn Scientific Liquid	6	1180 ml.
Potassium Hydrogen Phthalate	25 g.	Flinn Scientific Solid	12	300 g.
Potassium hydroxide	30 g.	Flinn Scientific Solid	2	60 g.
Potassium Iodide	505 g.	Flinn Scientific Solid	1	505 g.
Potassium Iodide	500 ml.	Flinn Scientific Liquid	9	4500 ml.
Potassium Nitrate	20 g., 15 g.	Flinn Scientific Solid	9	140 g.
Potassium Nitrate Solution	100 ml.	Flinn Scientific Inc. Liquid	2	200 ml.
Potassium Oxalate	75 g.	Flinn Scientific Solid	2	150 g.
Potassium Permanganate Solution	500 ml	Flinn Scientific Liquid	4	2000 ml.
Potassium Phosphate	4 g.	Flinn Scientific Solid	1	4 g.

Potassium Thiocyanate	10 g., 5 g.	Flinn Scientific Solid	7	50 g.
Potassium Thiocyanate Solution	30 ml.	Flinn Scientific Liquid	6	180 ml.
Powder Paint	1 lb	Sargent Solid	1	1 lb.
Protex	20 ml.	Kemtec Educational Corp. Liquid	1	20 ml.
Pump Oil	250 ml	Pump Oil Liquid	1	250 ml.
Salicylic Acid	20g	Flinn Scientific Solid	7	140 g.
Scott Reagent	20 ml.	Kemtec Educational Corp. Solid	2	40 ml.
Silver	5 g.	Flinn Scientific Solid	2	10 g.
Silver Nitrate	100 g.	Flinn Scientific Solid	3	300 g.
Silver Nitrate Solution	100 ml., 75 ml.	Flinn Scientific Inc. Liquid	7	325 ml.
Silver Oxide	30g	Flinn Scientific Inc. Solid	5	150 g.
Simulated Barbiturates	10 g.	Kemtec Educational Corp. Solid	2	20 g.
Sodium Chloride	120 g.	Flinn Scientific Solid	5	600 g.
Sodium Acetate	150 g., 120 g.	Flinn Scientific Solid	12	1530 g.
Sodium Acetate Solution	500 ml.	Flinn Scientific Liquid	5	2500 ml.

Sodium Bicarbonate	2 kg., 100g, 35	Flinn Scientific Solid	17	3600 g.
Sodium Borate, Tetra Solution	1 liter 75 ml.	Flinn Scientific Liquid S0364	3	1075 m.
Sodium Carbonate	2.5 kg., 50 g.	Sargent Welch Solid	19	7670 g.
Sodium Carbonate Solution	100 ml.	Flinn Scientific Liquid	1	100 ml.
Sodium Chloride	500 g.	Flinn Scientific Solid	7	11220 g
Sodium Chloride Powdered	500 g.	Flinn Scientific Solid	2	1000 g.
Sodium Chloride Solution	500 ml.	Flinn Scientific Solid	13	6500 ml.
Sodium Dihydrogen Citrate	12 g.	Flinn Scientific Solid	6	72 g.
Sodium Fluoride	100g	Sargent-Welch Solid	1	100 g.
Sodium Hydroxide	2 kg	Flinn Scientific Solid	2	4 kg.
Sodium Hydroxide Solution	500 ml., 200	Flinn Scientific Liquid	42	20400 ml.
Sodium Metabisulfite	25 g.	Flinn Scientific Solid	5	125. g.
Sodium Nitrate Solution	100 ml.	Flinn Scientific Liquid	1	100 ml.
Sodium Phosphate	500 g., 15 g.	Flinn Scientific Solid	4	545 g.
Sodium Phosphate (Monobasic) Solu	100 g.	Flinn Scientific Liquid	3	300 g.

Sodium Phosphate (Tribasic) Solution	500 ml.	Flinn Scientific Liquid	12	6000 ml.
Sodium Sulfate	10g	Flinn Scientific Solid	8	80 g.
Sodium Sulfate Solution	475 ml.	Flinn Scientific Liquid	1	475 ml.
Starch	32 g.	Flinn Scientific Solid	5	160 g.
Sudan III Fat Stain	100 ml	Carolina Liquid	2	200 ml.
Sulfuric Acid Solution	500 ml., 25 m	Flinn Scientific Inc. Liquid Different Molarity	29	11175 ml.
Table Salt	737 g.	Morton's Salt Solid	1	737 g.
Terpenoids Natural	180 ml.	Flinn Scientific Liquid	2	360 ml.
Thymol Blue Indicator Solution	100 ml.	Flinn Scientific Liquid	2	200 ml.
Thymolphthalein	5 g.	Flinn Scientific Solid	3	15 g.
Thymolphthalein Indicator Solution	30 ml.	Flinn Scientific Liquid	3	90 ml.
Tris-Borate EDTA 5X	500 ml.	Scholar CHEMESTRY Liquid	5	4500 ml.
Universal Indicator	20 ml.	Kemtec Educational Corp. Liquid	5	100 ml.
Van Urk Reagent	50 ml.	Kemtec Educational Corp Liquid	1	50 ml.
Xylene	10 ml.	Kemtec Educational Corp Liquid	1	10 ml.

Zinc	1100 g.	Flinn Scientific Solid	2 2200 g.
Zinc Acetate	500 g.	Flinn Scientific Solid	1 500 g.
Zinc Chloride	500 ml	Plastic Bottle Liquid	1 500 ml.
Zinc Nitrate Solution	100 ml.	Flinn Scientific Liquid	1 100 ml.
Zinc Phosphate	120 ml.	Plastic Bottle Liquid	1 120 ml.
Zinc Sulfate	100 g.	Flinn Scientific Solid	2 200 g.
